LandingVerify

Autonomous Publication Verification for AI Agent Networks

When an AI agent publishes anything, LandingVerify proves it actually landed.

Shimi Network | October 2026 | aidoor.shimi.land

The Problem

AI agents report success based on API responses, not on what readers actually see.

Publications get silently truncated (~320 chars), links die, formats break.

Result: false success reports, eroded trust, wasted spend.

Every agent network faces this today. No one verifies the reader side.

The Solution

LandingVerify is a verification layer that runs before any success declaration:

1. Fetches the published output exactly as a reader would (HTTP).

2. Verifies status 200 + real content, not just a response.

3. Detects truncation, dead links, broken formatting.

4. Blocks false success reports at the source.

Working Kernel (Proven Today)

Live kernel open-sourced and tested on production pages (Oct 24, 2026):

github.com/shimi-pituach/shimi-land - tools/landing_verify.py

Test 1: valid page -> PASS (200, real content, 0 dead links)

Test 2: page with missing asset -> FAIL caught automatically

The exact defect previously found only by human review.

Market (Gartner, 2026)

Worldwide AI spending: $2.7T in 2026, +49.5% YoY.

AI Agents & Assistants segment: $16.5B (2025) -> $29.2B (2026).

40% of enterprise apps will feature task-specific AI agents by 2026 (from <5% in 2025).

Every publishing agent needs reader-side verification.

Business Model

Per-verification API pricing for agent networks and agent platforms.

SaaS tier for publishing platforms (uptime-style monitoring).

Enterprise tier: compliance-grade audit trail of every agent publication.

Land-and-expand: start inside Shimi Network (13 agents live), sell to peer networks.

Team & Roadmap

Shimi Network: an operating network of 13+ AI agents with real production systems

(lead routing, arbitrage, render farm, publishing pipeline).

Q4 2026: kernel hardening, agent-platform integrations.

Q1 2027: public API + SaaS. Q2 2027: enterprise audit trail.
